

Using your Water Filter

As part of its Service Line Replacement Program CFPUA will supply you with a filter pitcher to be used temporarily for drinking and cooking water after the replacement is complete. The Brita Longlast Filter lasts up to six months.

Filter Instructions

1. Insert your Brita Longlast Filter into the reservoir by lining up the groove in the filter with the ridge in the reservoir.
2. Press firmly for a tight seal.
3. Add cold tap water.
4. Discard your first three pitchers of filtered water or use it to water plants. It's normal for carbon dust to appear in your first few fillings.
5. To clean your pitcher:
 - A) Remove the filter.
 - B) Hand-wash the pitcher, lid, and reservoir with a mild soap and rinse well. Never use abrasive detergents or a dishwasher.
6. For continued use, change your filter every 120 gallons or about every 6 months for most households.

To schedule lead and copper sampling 3 to 6 months following your service line replacement, contact CFPUA at 910-332-6932.
